

Demo report

Demo · Run TR-TEST · — · <https://example.com>

Needs attention

Pass rate is 75.0%, below 85%. 1 high severity bug(s) were found in this run.

Pass rate 75.0%	Executed 4 of 4 planned	Passed 3	Failed 1 a check did not hold
Errors 0 could not be carried out	Skipped 0	Bugs found 1	Coverage 80.0%

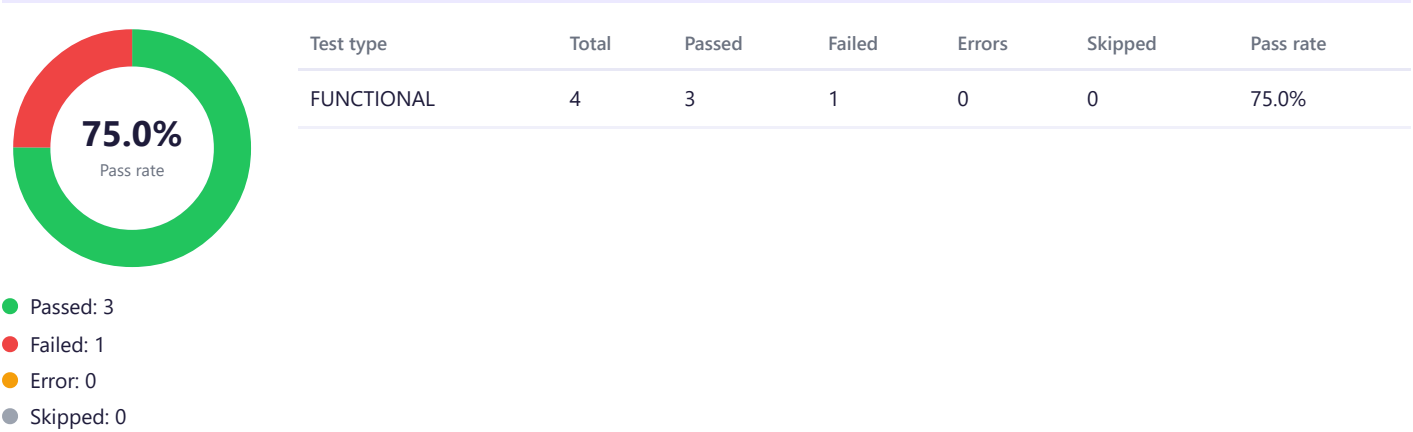

Read this first

- Only 4 test(s) were executed, so the percentages are not very meaningful.

Executive summary

The test run for the Demo project executed four test cases, achieving a 75% pass rate, which is below the acceptable threshold of 85%. One functional test failed, indicating a login issue, and a high-severity bug was recorded. Due to the small sample size, the metrics have limited statistical significance, and the overall health is flagged as needing attention.

Results at a glance

Key findings

- Pass rate 75% below target
- One functional failure in login
- High severity bug open
- Only four tests executed limiting confidence
- Test coverage reported at 80%

Risks

- Login failure may block user access
- High severity bug could impact production
- Limited test sample reduces reliability of metrics

Recommendations

- Fix the open high-severity login bug promptly
- Expand the test suite beyond four cases to improve confidence
- Re-run the functional tests after bug fix to verify resolution
- Monitor pass rate and aim for at least 85% in next cycle

Bugs found in this run (1)

High: 1

Bug	Title	Severity	Status	Feature area
BUG-0001	Login fails	HIGH	OPEN	Login

Failed and errored tests

Test	Type	Result	Details
Login works	FUNCTIONAL	FAILED	Expected the page to show Welcome

Generated 19 Sep 2026, 19:01 UTC. The narrative sections were written by an AI model (openai/gpt-oss-120b via groq) from the figures in this report and should be reviewed before sharing. Pass rate = passed ÷ (passed + failed + error); skipped tests are excluded. Error means a test could not be carried out and is not counted as a bug. The health rating uses simple thresholds (pass rate, critical and high bugs, share of errors) and is a guide, not a release decision.
